3. GLOSSARY

1.	Asset	An asset is anything of value that is owned by
		a person or business
	Available for Sale	The securities available for sale are those
		securities where the intention of the bank is
		neither to trade nor to hold till maturity. These
		securities are valued at the fair value which is
		determined by reference to the best available
		source of current market quotations or other
		data relative to current value.
	Balance Sheet	A balance sheet is a financial statement of the
		assets and liabilities of a trading concern,
		recorded at a particular point in time.
	Banking Book	The banking book comprises assets and
	Balikiliy BOOK	liabilities, which are contracted basically on
		account of relationship or for steady income
		and statutory obligations and are generally
		held till maturity.
	Basel Capital Accord	The Basel Capital Accord is an Agreement
		concluded among country representatives in
		1988 to develop standardised risk-based
		capital requirements for banks across
		countries. The Accord was replaced with a
		new capital adequacy framework (Basel II),
		published in June 2004.
		Basel II is based on three mutually reinforcing
		pillars that allow banks and supervisors to
		evaluate properly the various risks that banks
		face. These three pillars are:
		 minimum capital requirements, which seek to refine the present measurement

	framework
	supervisory review of an institution's
	capital adequacy and internal assessment
	process;
	 market discipline through effective
	disclosure to encourage safe and sound
	banking practices
Basel Committee on	The Basel Committee is a committee of bank
Banking Supervision	supervisors consisting of members from each
	of the G10 countries. The Committee is a
	forum for discussion on the handling of
	specific supervisory problems. It coordinates
	the sharing of supervisory responsibilities
	among national authorities in respect of banks'
	foreign establishments with the aim of
	ensuring effective supervision of banks'
	activities worldwide.
Basic Indicator Approach	An operational risk measurement technique
	permitted under Basel II. The approach sets a
	charge for operational risk as a fixed
	percentage ("alpha factor") of a single
	indicator. The indicator serves as a proxy for
	the bank's risk exposure.
Basis Risk	The risk that the interest rate of different
	assets, liabilities and off-balance sheet items
	may change in different magnitude is termed
	as basis risk.
Capital	Capital refers to the funds (e.g., money, loans,
	equity) which are available to carry on a
	business, make an investment, and generate
	future revenue. Capital also refers to physical
	assets which can be used to generate future
	returns.

Capital adequacy	A measure of the adequacy of an entity's
	capital resources in relation to its current
	liabilities and also in relation to the risks
	associated with its assets.
	An appropriate level of capital adequacy
	ensures that the entity has sufficient capital to
	support its activities and that its net worth is
	sufficient to absorb adverse changes in the
	value of its assets without becoming insolvent.
	For example, under BIS (Bank for International
	Settlements) rules, banks are required to
	maintain a certain level of capital against their
	risk-adjusted assets.
Capital reserves	That portion of a company's profits not paid
	out as dividends to shareholders. They are
	also known as undistributable reserves.
Convertible Bond	A bond giving the investor the option to
	convert the bond into equity at a fixed
	conversion price or as per a pre-determined
	pricing formula.
Core Capital	Tier 1 capital is generally referred to as Core
	Capital
Credit risk	Risk that a party to a contractual agreement or
	transaction will be unable to meet their
	obligations or will default on commitments.
	Credit risk can be associated with almost any
	transaction or instrument such as swaps,
	repos, CDs, foreign exchange transactions,
	etc.
	Specific types of credit risk include sovereign
	risk, country risk, legal or force majeure risk,
Deheriture	marginal risk and settlement risk.
Debentures	Bonds issued by a company bearing a fixed

	note of internet yought resurble helf we where
	rate of interest usually payable half yearly on
	specific dates and principal amount repayable
	on a particular date on redemption of the
	debentures.
Deferred Tax Assets	Unabsorbed depreciation and carry forward of
	losses which can be set-off against future
	taxable income which is considered as timing
	differences result in deferred tax assets. The
	deferred Tax Assets are accounted as per the
	Accounting Standard 22.
	Deferred Tax Assets have an effect of
	decreasing future income tax payments, which
	indicates that they are prepaid income taxes
	and meet definition of assets. Whereas
	deferred tax liabilities have an effect of
	increasing future year's income tax payments,
	which indicates that they are accrued income
	taxes and meet definition of liabilities
Derivative	A derivative instrument derives much of its
	value from an underlying product. Examples of
	derivatives include futures, options, forwards
	and swaps. For example, a forward contract
	can be derived from the spot currency market
	and the spot markets for borrowing and
	lending. In the past, derivative instruments
	tended to be restricted only to those products
	which could be derived from spot markets.
	However, today the term seems to be used for
	any product that can be derived from any
	other.

Duration	Duration (Macaulay duration) measures the
	price volatility of fixed income securities. It is
	often used in the comparison of the interest
	rate risk between securities with different
	coupons and different maturities. It is the
	weighted average of the present value of all
	the cash flows associated with a fixed income
	security. It is expressed in years. The duration
	of a fixed income security is always shorter
	than its term to maturity, except in the case of
	zero coupon securities where they are the
	same.
Foreign Institutional	An institution established or incorporated
Investor	outside India which proposes to make
	investment in India insecurities; provided that
	a domestic asset management company or
	domestic portfolio manager who manages
	funds raised or collected or brought from
	outside India for investment in India on behalf
	of a sub-account, shall be deemed to be a
	Foreign Institutional Investor.
Forward Contract	A forward contract is an agreement between
	two parties to buy or sell an agreed amount of
	a commodity or financial instrument at an
	agreed price, for delivery on an agreed future
	date. In contrast to a futures contract, a
	forward contract is not transferable or
	exchange tradable, its terms are not
	standardized and no margin is exchanged.
	The buyer of the forward contract is said to be
	long the contract and the seller is said to be
	short the contract.
General provisions and loss	Such reserves, if they are not attributable to
reserves	the actual diminution in value or identifiable

	· · · · · · · · · · · · · · · · · · ·
	potential loss in any specific asset and are
	available to meet unexpected losses, can be
	included in Tier II capital
General risk	Risk that relates to overall market conditions
	while specific risk is risk that relates to the
	issuer of a particular security
Hedging	Taking action to eliminate or reduce exposure
	to risk
Held for Trading	Securities where the intention is to trade by
	taking advantage of short-term price / interest
	rate movements.
Horizontal Disallowance	A disallowance of offsets to required capital
	used the BIS Method for assessing market risk
	for regulatory capital. In order to calculate the
	capital required for interest rate risk of a
	trading portfolio, the BIS Method allows offsets
	of long and short positions. Yet interest rate
	risk of instruments at different horizontal points
	of the yield curve are not perfectly correlated.
	Hence, the BIS Method requires that a portion
	of these offsets be disallowed.
Hybrid debt capital	In this category, fall a number of capital
instruments	instruments, which combine certain
	characteristics of equity and certain
	characteristics of debt. Each has a particular
	feature, which can be considered to affect its
	quality as capital. Where these instruments
	have close similarities to equity, in particular
	when they are able to support losses on an
	ongoing basis without triggering liquidation,
	they may be included in Tier II capital.
Interest rate risk	Risk that the financial value of assets or
	liabilities (or inflows/outflows) will be altered

	because of fluctuations in interest rates. For
	example, the risk that future investment may
	have to be made at lower rates and future
	borrowings at higher rates.
Long Position	A long position refers to a position where gains
	arise from a rise in the value of the underlying.
Market risk	Risk of loss arising from movements in market
	prices or rates away from the rates or prices
	set out in a transaction or agreement.
Modified Duration	The modified duration or volatility of an interest
	bearing security is its Macaulay duration
	divided by one plus the coupon rate of the
	security. It represents the percentage change
	in a securities' price for a 100 basis points
	change in yield. It is generally accurate for
	only small changes in the yield.
	$MD = -\frac{dP}{dY} \cdot \frac{1}{P}$
	where:
	MD = Modified duration.
	P = Gross price (i.e. clean price plus accrued
	interest).
	dP = Corresponding small change in price.
	dY = Small change in yield compounded with
	the frequency of the coupon payment.
Mortgage-backed security	A bond-type security in which the collateral is
	provided by a pool of mortgages. Income from
	the underlying mortgages is used to meet
	interest and principal repayments.
Mutual Fund	Mutual Fund is a mechanism for pooling the
	resources by issuing units to the investors and
	investing funds in securities in accordance
	with objectives as disclosed in offer document.

	A fund established in the form of a trust to
	raise monies through the sale of units to the
	public or a section of the public under one or
	more schemes for investing in securities,
	including money market instruments.
Net Interest Margin	Net interest margin is the net interest income
	divided by average interest earning assets
Net NPA	Net NPA = Gross NPA - (Balance in Interest
	Suspense account + DICGC/ECGC claims
	received and held pending adjustment + Part
	payment received and kept in suspense
	account + Total provisions held)
Nostro accounts	Foreign currency settlement accounts that a
	bank maintains with its overseas
	correspondent banks. These accounts are
	assets of the domestic bank.
Off-Balance Sheet	Off-Balance Sheet exposures refer to the
exposures	business activities of a bank that generally do
	not involve booking assets (loans) and taking
	deposits. Off-balance sheet activities normally
	generate fees, but produce liabilities or assets
	that are deferred or contingent and thus, do
	not appear on the institution's balance sheet
	until or unless they become actual assets or
	liabilities.
Open position	It is the net difference between the amounts
	payable and amounts receivable in a particular
	instrument or commodity. It results from the
	existence of a net long or net short position in
	the particular instrument or commodity.
Option	An option is a contract which grants the buyer
	the right, but not the obligation, to buy (call
	option) or sell (put option) an asset,

	commodity, currency or financial instrument at
	an agreed rate (exercise price) on or before an
	agreed date (expiry or settlement date). The
	buyer pays the seller an amount called the
	premium in exchange for this right. This
	premium is the price of the option.
Risk	The possibility of an outcome not occurring as
	expected. It can be measured and is not the
	same as uncertainty, which is not measurable.
	In financial terms, risk refers to the possibility
	of financial loss. It can be classified as
	credit risk, market risk and operational risk.
Risk Asset Ratio	A bank's risk asset ratio is the ratio of a bank's
	risk assets to its capital funds. Risk assets
	include assets other than highly rated
	government and government agency
	obligations and cash, for example, corporate
	bonds and loans. The capital funds include
	capital and undistributed reserves. The lower
	the risk asset ratio the better the bank's 'capital
	cushion'
Risk Weights	Basel II sets out a risk-weighting schedule for
	measuring the credit risk of obligors. The risk
	weights are linked to ratings given to
	sovereigns, financial institutions and
	corporations by external credit rating agencies.
Securitisation	The process whereby similar debt
	instruments/assets are pooled together and
	repackaged into marketable securities which
	can be sold to investors. The process of loan
	securitisation is used by banks to move their
	assets off the balance sheet in order to
	improve their capital asset ratios.

		A short position refers to a martitude with
Sn	ort position	A short position refers to a position where
		gains arise from a decline in the value of the
		underlying. It also refers to the sale of a
		security in which the seller does not have a
		long position.
Spo	ecific risk	Within the framework of the BIS proposals on
		market risk, specific risk refers to the risk
		associated with a specific security, issuer or
		company, as opposed to the risk associated
		with a market or market sector (general risk).
Su	bordinated debt	Refers to the status of the debt. In the event of
		the bankruptcy or liquidation of the debtor,
		subordinated debt only has a secondary claim
		on repayments, after other debt has been
		repaid.
Tie	r one (or Tier I) capital	A term used to refer to one of the components
		of regulatory capital. It consists mainly of
		share capital and disclosed reserves (minus
		goodwill, if any). Tier I items are deemed to be
		of the highest quality because they are fully
		available to cover losses. The other categories
		of capital defined in Basel II are Tier II (or
		supplementary) capital and Tier III (or
		additional supplementary) capital.
Tie	r two (or Tier II) capital	Refers to one of components of regulatory
		capital. Also known as supplementary capital,
		it consists of certain reserves and certain
		types of subordinated debt. Tier II items qualify
		as regulatory capital to the extent that they can
		be used to absorb losses arising from a bank's
		activities. Tier II's capital loss absorption
		capacity is lower than that of Tier I capital.
Tra	ding Book	A trading book or portfolio refers to the book of

	financial instruments held for the purpose of
	short-term trading, as opposed to securities
	that would be held as a long-term investment.
	The trading book refers to the assets that are
	held primarily for generating profit on short-
	term differences in prices/yields. The price risk
	is the prime concern of banks in trading book.
Underwrite	Generally, to underwrite means to assume a
	risk for a fee. Its two most common contexts
	are:
	a) Securities: a dealer or investment bank
	agrees to purchase a new issue of securities
	from the issuer and distribute these securities
	to investors. The underwriter may be one
	person or part of an underwriting syndicate.
	Thus the issuer faces no risk of being left with
	unsold securities.
	b) Insurance: a person or company agrees to
	provide financial compensation against the risk
	of fire, theft, death, disability, etc., for a fee
	called a premium.
Undisclosed Reserves	These reserves often serve as a cushion
	against unexpected losses, but they are less
	permanent in nature and cannot be considered
	as 'Core Capital'. Revaluation reserves arise
	from revaluation of assets that are
	undervalued on the bank's books, typically
	bank premises and marketable securities. The
	extent to which the revaluation reserves can
	be relied upon as a cushion for unexpected
	losses depends mainly upon the level of
	certainty that can be placed on estimates of
	the market values of the relevant assets, the
	subsequent deterioration in values under

difficult market conditions or in a forced sale,
potential for actual liquidation at those values,
ax consequences of revaluation, etc
t is a method for calculating and controlling
exposure to market risk. VAR is a single
number (currency amount) which estimates
he maximum expected loss of a portfolio over
a given time horizon (the holding period) and
at a given confidence level.
A fund with the purpose of investing in start-
up businesses that is perceived to have
excellent growth prospects but does not have
access to capital markets.
n the BIS Method for determining regulatory
capital necessary to cushion market risk, a
eversal of the offsets of a general risk charge
of a long position by a short position in two or
more securities in the same time band in the
vield curve where the securities have differing
credit risks.
